Trading Perps and DeFi on Demex

Demex is redefining **DEX** trading, making it smoother, faster, and more powerful. Whether you're trading **perpetuals**, engaging in **DeFi**, or leveraging **lending** and **borrowing**, we're building the ultimate experience for you. Here's what's new—and what's coming next.

Live Now on Demex

- ✅ **Direct Deposits** – No wallet setup required. Simply generate a unique deposit address and send funds directly—quick, secure, and hassle-free. This feature removes the friction of connecting a wallet, making it easier than ever for users to onboard and start trading instantly.
- ✅ **Skip Protocol Integration** – Swap and bridge from over 20 chains, including **Solana, Base, Avalanche, and more**, directly to Demex. With this seamless integration, traders can move assets effortlessly across different ecosystems and access **perp trading** without relying on centralized exchanges. On-chain transfers are now as smooth as Binance or Bybit.

✔ **Optimism & Avalanche USDC Deposits** – Enjoy lower fees and faster transactions when depositing USDC from **Optimism and Avalanche via Axelar**. This update ensures that traders have more cost-effective and efficient ways to fund their accounts, improving the overall user experience when trading **perpetuals** on Demex.

We're bringing CeFi-level convenience to DeFi—without compromising on decentralization.

What's Coming Next?

Demex will also support **cross-margin** and **multi-asset collateral** in Q1 2025, further enhancing capital efficiency for traders.

- ◆ **Cross-Margin** – Trade multiple contracts or markets from a single margin account. This allows unrealized profits from one position to cover margin requirements for another, reducing the total margin needed and enabling more strategic capital allocation.
- ◆ **Multi-Asset Collateral** – Use a variety of tokens—including yield-bearing assets—to open and maintain positions instead of being limited to USD. This flexibility lets traders optimize their portfolios for margin requirements and take advantage of market opportunities more effectively.
- ◆ **User Vaults** – Manage your own vault, allowing others to deposit funds while you trade on their behalf.
- ◆ **Permissionless Perp Listings** – List any market, anytime. No gatekeepers—just pure **DeFi** freedom.

\$DMX: The Next Evolution of Demex

DMX is proposed as the new **governance token of Demex**, designed to power the next generation of **omnichain trading and DeFi**. This upgrade from SWTH will introduce **enhanced utility and a more sustainable tokenomics model**.

Proposed Value Accrual Mechanisms

DMX is designed to provide tangible value to its holders through multiple mechanisms, ensuring a sustainable and rewarding ecosystem:

A portion of **trading fees** generated on Demex will be distributed to DMX stakers, offering a steady passive income for token holders. Additionally, **network fees** collected from blockchain transactions and operations will further contribute to staking rewards. The introduction of **listing fees** from permissionless perp market listings will create an additional revenue stream that benefits the ecosystem. To reinforce long-term value, **protocol-driven buybacks** will systematically repurchase DMX from the market, helping to stabilize and support its price over time.

Demex has made significant strides in improving decentralized trading. Looking ahead, we're working on unlocking more capital efficiency for traders, adding flexibility in how you manage and collateralize your positions, and giving you more control over listing markets. Last but not the least, stay tuned for \$DMX.
